

ETHAN KEMENY

ethan.kemeny1@gmail.com | in/ethan-kemeny- | github.com/e-kemeny | Lubbock, TX | (571) 352-1441

SKILLS

- Python, C, Java, TypeScript, MASM Assembly, Pandas, NumPy, Scikit-Learn, PyTorch, PostgreSQL, Supabase, Git, GitHub, Machine Learning, Feature Engineering, Model Evaluation, Neural Networks, RAG, AI Agents, Multi-Agent Systems, LLMs, Embeddings, Semantic Search, Digital Logic, Verilog, AMD Vivado

EDUCATION

Texas Tech University || Lubbock

08/2024 – current

B.S. Computer Science, Minor in Mathematics, President's List, GPA: 4.0

Coursework: Generative AI, Design & Analysis of Algorithms, Data Structures & Algorithms, Object-Oriented Programming, Computer Architecture, Concepts of Programming Languages, Digital System Design, Data Science, Theory of Automata, Linear Algebra, Statistics, Calculus III, Discrete Mathematics.

Cornell Tech - Cornell University || New York City

03/2026 – current

Break Through Tech Fellow

- Selected from 4,300+ applicants for a competitive 12-month AI fellowship, advancing to the industry AI Studio to design and develop a machine learning solution for a Microsoft-sponsored engineering challenge.
- Earned Cornell's Machine Learning Foundations Certificate, completing 135 hours of training in machine learning, feature engineering, model evaluation, neural networks, deep learning, LLMs, RAG, and AI agents.

Brigham Young University-Idaho || Rexburg

09/2020 – 12/2022

Associates of Science

Relevant Coursework: Economics, Mass Communications, Business Administration, Web Development.

PROFESSIONAL EXPERIENCE

Klyc: AI/ML Engineering Intern

02/2026 – current

- Engineered a self-learning strategy engine with pre-launch virality scoring and feedback loops using actual-vs-predicted deltas to continuously improve future campaign performance and strategy.
- Re-architected a multi-model AI backend by migrating from OpenAI to Anthropic Claude and consolidating 9 agent classes into a configurable orchestration system, reducing duplicate logic and simplifying the system.
- Developed a RAG knowledge layer using embeddings and semantic search to retrieve relevant client brand data, grounding AI-generated content in brand-specific context, guidelines, and strategy.

Microsoft x Break Through Tech: AI/ML Project

08/2026 – current

- Collaborated on a 6-person AI Studio team with a Microsoft Challenge Advisor to develop data-driven, explainable trust signals for evaluating the quality and reliability of public GitHub repositories.
- Analyzed repository activity, maintenance history, and contributor networks to engineer and evaluate interpretable ML signals for repository-level trust scoring, risk assessment, and decision support.

DeadSocks LLC: Founder

07/2020 – current

- Built and scaled a digital media brand to 1.5M+ resource downloads and 8M+ impressions, leveraging audience analytics and 5,600+ user comments to guide content and product growth decisions.
- Built and managed the company's web platform and digital distribution infrastructure for merchandise, custom digital assets, and community resources, supporting reliable digital content delivery at scale.
- Hired and managed 1099 contractors across software development, digital design, animation, and content production, overseeing project requirements, creative direction, deliverables, and quality standards.

TECHNICAL PROJECTS

AURA: HackWestTX VII Hackathon Winner

- Won "Best Use of Backboard" for our adaptive AI tutoring platform built to improve individualized learning.
- Engineered a dual-context RAG system combining professor-provided course knowledge with student mastery data, integrating Backboard and Gemini to generate grounded practice and personalize learning.

Rocket Launch Control System

- Architected a safety-critical launch control system using Verilog in AMD Vivado, implementing arming/disarming finite state machines and analyzing synthesized logic to prevent invalid state transitions.
- Integrated precise clock generation and signal synchronization to ensure reliable hardware execution.
