

ETHAN KEMENY

ethan.kemeny1@gmail.com | [/in/ethan-kemeny-](https://in/ethan-kemeny-) | github.com/e-kemeny | Lubbock, TX | (571) 352-1441

SKILLS

- C, Python, Java, MASM, Pandas, NumPy, Scikit-Learn, Git, Github, Prompt Engineering, AI Agents, RAG, Automation, System Integration, Digital Logic, Hardware Optimization, Business Scalability/Optimization.

EDUCATION

Cornell Tech - Cornell University || New York City 03/2026 – current

Break Through Tech Fellow

- Selected from a pool of 4,300+ applicants for a competitive, technical 12-month AI program, collaborating on a team industry AI Studio project.
- Received a certificate in Machine Learning, covering supervised learning, model evaluation, feature engineering, and hyperparameter optimization.

Texas Tech University || Lubbock 08/2024 – current

B.S. Computer Science, Minor in Mathematics, President's List, GPA: 4.0

Relevant Coursework: Neural Networks, Generative AI, Data Structures and Algorithms, Statistics, Linear Algebra, Object-Oriented Programming, Computer Architecture, Discrete Mathematics, Digital System Design, Data Science, Theory of Automata, Assembly Language x86, Calculus III.

Brigham Young University-Idaho || Rexburg 09/2020 – 12/2022

Associates Degree of Science

Relevant Coursework: Economics, Mass Communications, Business Administration, Web Development.

PROFESSIONAL EXPERIENCE

Klyc: AI/ML Engineering Intern 02/2026 – current

- Engineered self-learning strategy engine with pre-launch virality scoring and feedback loops using actual-vs-predicted deltas to continuously improve campaign
- Re-architected multi-model AI backend by migrating OpenAI to Anthropic Claude and consolidating 9 agent classes into one configurable orchestration system.
- Developed RAG knowledge layer with embeddings and semantic search grounded in client brand data.

DeadSocks LLC: Owner 07/2020 – current

- Leveraged audience retention datasets to receive 10,000+ positive reviews, host over 1,500,000 resource downloads with over 4,500,000 lifetime impressions.
- Developed a responsive company website featuring merchandise, apparel, custom designs, and social media integrations to strengthen brand presence and customer engagement.
- Hired 1099 employees for company projects that utilized basic JavaScript programs and expertise in Adobe Suite for productions, animations, and computer programs.

Valley Home Health: Director of Operations 05/2023 – 08/2023

- Overhauled company website and automated client workflows, increasing traffic by 235% while monitoring KPIs to measure operational performance, supply inventory, and product recalls.
- Ensured rigorous HIPAA compliance standards on privacy and privileged information, cleared clinical nursing notes for billing, complying with QAPI standards, and passed state inspection with a perfect score.
- Executed background searches and reports for hiring, onboarding, and maintaining an ethical staff of nurses, doctors, and therapists while automating offer letters and checking payroll accuracy.

TECHNICAL PROJECTS

Airbnb Superhost Classification

- Built a logistic regression model to classify Airbnb Superhost status using Python and scikit-learn.
- Optimized model performance through feature selection, hyperparameter tuning, and evaluation of logistic regression, decision tree, and KNN models (ROC-AUC $\approx$ 0.83) through a real-world Airbnb dataset.

Rocket Launch Control System

- Architected a safety-critical launch control system using Verilog in AMD Vivado, implementing arming/disarming finite state machines and analyzing synthesized logic to prevent invalid state transitions.
- Integrated precise clock generation and signal synchronization to ensure reliable hardware execution.
